What happens if they sent in their 30 day notice but never sent anything in after? Per 60.537(f) aren't they supposed to submit test data within 60 days? Who is tracking compliance with that requirement? How do we learn if companies are withholding data on units that are Step 2 compliant, if Rafael won't release emissions data? Sorry all the questions, this rule just seems to make it very difficult for regulators to understand what is happening.

Lisa,

Apologies, I forgot to address the second part of your question.

Certification test data should be submitted to Rafael Sanchez in OECA. Once the certification is issued the company is supposed to post those data on their website. Also, yes, compliance test data is NOT cbi, though drawings and such may be cbi. Also, anything that when submitted is CLAIMED as cbi must first be cleared as non-cbi before we can release it.

Rafael should have access to such information though it seems unlikely to me that EPA would release ANY data while it is pending review (not yet certified).

Helpful?

Stef

Thanks! Has Ben done any other testing work on the species issue? Can that data be shared? Is there more work happening than the burns he has in the memo?

On another note, I have gone through the 30 day notice requirements, my understanding is that test data must be submitted to EPA within 60 days of conducting the test. Who does that data go to and how can the public access it? My understanding is emissions data can't be held confidential and since they sent it in for certification testing, it isn't a development stove so the public should have access – correct? Any thoughts or advice on how to access this information – 1) that the data was submitted and 2) the emissions data.

All,

See attached memo. Looking for input.

Ben
